

Diamond Crystal® Sodium Shield™ Potassium Chloride

Why are we the Sodium Shield™? When used in your water softener, our product removes several hard minerals from your water, including iron, calcium, magnesium, and even barium. This salt-substitute product removes these minerals by using a natural sodium substitute – fancy name: potassium chloride – to give you the soft water you want without the elements you don't want. Our water conditioning salt-substitute removes hard minerals, leaving you with soft, bright towels to wrap around your family, shiny dishes that can be used even with your most critical guests, and longer pipe and appliance life helping you save money to spend on something more fun.

We know the advanced science of how KCl interacts within a water softener.
A truly brilliant formula: Diamond Crystal® Sodium Shield™ Potassium Chloride in, SOFT WATER out.
